0249

Executive Summary

Objective To determine the performance of the following material when tested in accordance with BS EN ISO 11925-2:2002.

| Generic Description | Product reference | Thickness | Weight per unit area or density | | | |
|---|--------------------------------------|------------|---------------------------------------|--|--|--|
| Interlocking PVC floor tile tested loose laid over a fibre cement based substrate | | Not stated | Not stated | | | |
| Individual components used to manufacture composite: | | | | | | |
| PVC floor tile for commercial use | "R-Tile Interlocking PVC Floor Tile" | 5mm | 10kg/m ² SG: 1.45 | | | |
| Fibre cement board substrate | "NT D4 604" | 6mm | 1800kg/m ³ | | | |
| Please see page 5 of this test report for the full description of the product tested | | | | | | |

Test SponsorR-Tek Manufacturing Ltd., Unit 1, Hamiltownsbawn Industrial Estate, Armagh, Co.
Armagh, BT60 1HW

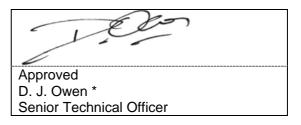

Test Results: On each set of six specimens which were tested, the flame tip did not reach a distance of 150mm before the end of the test.

Date of Test 29th January 2010

Signatories

Responsible Officer S. Deeming * Senior Technical Officer

* For and on behalf of Exova Warringtonfire.

Authorised C. Dean * Operations Manager

Test Details

| Purpose of test | To determine the performance of specimens of a product when they are |
|-----------------|---|
| | subjected to the conditions of the test specified in BS EN ISO 11925-2:2002 |
| | "Reaction to Fire tests - Ignitability Of Building Products Subjected to Direct |
| | Impingement of Flame – Part 2: Single Flame Source Test". |

The test was performed in accordance with the procedure specified in BS EN ISO 11925-2:2002 Reaction to Fire Tests - Ignitability of Building Products subjected to direct impingement of flame – Part 2: Single Flame Source Test, and this report should be read in conjunction with that BS EN ISO Standard.

- Scope of test BS EN ISO 11925-2 specifies a method of test for determining the ignitability of building products by direct small flame impingement under zero impressed irradiance using specimens tested in a vertical orientation.
- Fire test study group/EGOLF Certain aspects of some fire test specifications are open to different interpretations. The Fire Test Study Group and EGOLF have identified a number of such areas and has agreed Resolutions which define common agreement of interpretations between fire test laboratories which are members of the Groups. Where such Resolutions are applicable to this test they have been followed.
- **Instruction to test** The test was conducted on the 29th January 2010 at the request of R-Tek Manufacturing Ltd., the sponsor of the test.
- Provision of test
specimensThe specimens were supplied by the sponsor of the test.ExovaWarringtonfire
was not involved in any selection or sampling procedure.
- **Conditioning** of The specimens were received on the 8th January 2010.

Prior to test the specimens were stored for 21 days in a standard atmosphere as defined in BS EN 13238:2001 Conditioning Procedures and General Rules for selection of substrates until constant mass was achieved.

Intended Floorcovering application

specimens

Substrate The specimens were tested loose laid over a nominally 6mm thick fibre cement based substrate.

Flame application The flame was applied for 15 seconds. time

Description of Test Specimens

The description of the specimens given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

| General description | | Interlocking PVC floor tile which was tested loose laid over a nominally 6mm thick fibre cement based substrate | |
|---------------------------------|---------------------------------------|---|--|
| | Product reference | "R-Tile Interlocking PVC Floor Tile" | |
| | Generic type | PVC floor tile for commercial use | |
| | Name of manufacturer | R-Tek Manufacturing Ltd. | |
| | Weight per unit area | 10kg/m ² (stated by sponsor) | |
| | | 9.20kg/m ² (determined by Exova Warringtonfire) | |
| | Density | 1.45 (specific gravity – stated by sponsor) | |
| Floor | | 1.75g/cm ³ (determined by Exova Warringtonfire) | |
| Covering | Thickness | 5mm (stated by sponsor) | |
| | | 5.25mm (determined by Exova Warringtonfire) | |
| | Colour | "Grey" (observed by Exova Warringtonfire) | |
| | Finish | Textured | |
| | Flame retardant details | The sponsor of the test has confirmed that no flame | |
| | | retardant additives were utilised in the production of the | |
| | | product / component | |
| | Trade name | "NT D4 604" | |
| | Generic type | Fibre cement board | |
| Substrate | Supplier | Scheerders van de Kerkhove (SVK) | |
| | Thickness | 6mm | |
| | Density | 1800kg/m ³ | |
| Brief descrip process of the | otion of manufacturing floor covering | Injection moulded | |

Test Results

Number of specimens tested of which were subjected to surface exposure to flame with the decorative face exposed.

Six specimens were tested, each of which were subjected to edge exposure to flame with the decorative face exposed.

Applicability test results of The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test, they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which they were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product which is supplied or used is fully represented by the specimens which were tested.

The test results for the individual specimens, together with observations made during the test and comments on any difficulties encountered during the test are given in Tables 1 and 2.

On each set of six specimens which were tested, the flame tip did not reach a distance of 150mm before the end of the test.

Validity The specification and interpretation of fire test methods are the subject of ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over five years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the test report.

This report may only be reproduced in full. Extracts or abridgements shall not be published without permission of **Exova Warringtonfire**.
